### ELEN<br/>3007 A Group <br/> $\underline{27}$ - Assignment 2024:

Application of Bayes' Theorem for Locating a Robot's Position in an Enclosed Area

Kgadile E Masemola (876729)

September 13, 2024

### **QUESTION 1:**

Why does  $\theta_k$  not lie between  $-\pi$  and  $\pi$  for which  $p(\theta_k|\alpha,\beta,B)$  would then be  $\frac{1}{2\pi}$ ?

#### Solution 1:

The setup of the problem indicates that the photodetectors are placed along the x-axis, above which the robot is located. Therefore, the signal originates from one side of the horizontal axis. This limits the range of the detectors to capture only collimated flashes within the azimuth  $-\frac{\pi}{2}$  to  $\frac{\pi}{2}$ .

### **QUESTION 2:**

Prove that

$$p(x_k|\alpha,\beta,B) = \frac{\beta}{\pi(\beta^2 + (x_k - \alpha)^2)}$$
 (1)

#### Solution 2:

Using the relation  $x_k = \alpha + \beta \tan \theta_k$  (given in the brief [1]) and the prior PDF  $p(\theta_k | \alpha, \beta, B) = f_{\Theta|\Lambda,\beta,B}(\cdot) = \frac{1}{\pi}$ , we apply the transformation of random variables (notations for random variables defined **Solution 8**). This change of variables leads to the PDF transformation:

$$p_x(x) = p_\theta(\theta) \left| \frac{d\theta}{dx} \right| \tag{2}$$

Given the relation  $x_k = \alpha + \beta \tan \theta_k$ , we can calculate:

$$f_X(x_k) = f_{\Theta}(\theta_k) \times \left| \frac{d\theta_k}{dx_k} \right| = f_{\Theta}(\theta_k) \times \left| \left( \frac{dx_k}{d\theta_k} \right)^{-1} \right| = \frac{1}{\pi} \times \left| \frac{1}{\beta \sec^2 \theta_k} \right| = \frac{1}{\pi} \times \frac{\beta^2}{\beta(\beta^2 + (x_k - \alpha)^2)} ::, f_X(x_k) = \frac{1}{\beta(\beta^2 + (x_k - \alpha)^2)} ::, f_X(x_k - \alpha)^2 ::, f_X(x_k - \alpha)^2 ::, f_X(x_k - \alpha)^2 ::, f_X(x_k - \alpha)$$

### **QUESTION 3:**

Plot  $p(x_k|\alpha,\beta,B)$  and relate its width at half maximum to the parameters of the PDF.

### Solution 3:

The plot of the PDF  $p(x_k|\alpha, \beta, B)$ , shown in Figure 1, uses the parameters  $\alpha = 4$  and  $\beta = 2$  for  $x_k \in [-10, 10]$ . The maximum value occurs when  $x_k = \alpha = 4$ . At half the maximum, the width of the distribution is  $2\beta = 4$ . The half-maximum height is approximately y = 0.1591536.

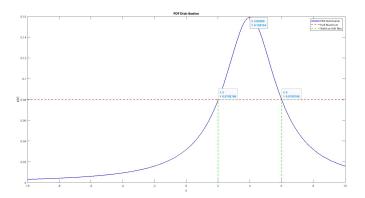

Figure 1: Q3 Plot of the PDF  $p(x_k|\alpha,\beta,B)$ 

# **QUESTION 4:**

Derive the expression for  $p(\alpha|x_k, \beta, B)$ .

### Solution 4:

Using Bayes' Theorem, we derive the conditional distribution:

$$f_{\Lambda|X,\mathfrak{B},B}(\alpha|x_k,\beta) = \frac{f_{X|\Lambda,\mathfrak{B},B}(x_k|\alpha,\beta)f_{\Lambda}(\alpha)}{f_{X}(x_k)} \tag{4}$$

By applying similar techniques from Solution 2, the result is:

$$f_{\Lambda|X,\mathfrak{B},B}(\alpha|x_k,\beta) = \frac{1}{\pi} \frac{\beta}{\beta^2 + (x_k - \alpha)^2}, \blacksquare$$
 (5)

# **QUESTION 5:**

Derive an expression for  $p(\alpha|x_{k_{k=1}}^{N}, \beta, B)$ . (State all assumptions.)

### Solution 5:

Assumptions:

- The prior PDF is  $f_{\Theta|\Lambda,\mathfrak{B},B}(\cdot) = \frac{1}{\pi}$ .
- The measurements  $x_k k = 1^N$  are inputs to the random variable  $X_k(\cdot)$ .
- The measurements are independent and continuous.

The joint distribution of  $p(\alpha|x_k^N k = 1, \mathfrak{B}, B)$  is:

$$f_{\Lambda|X_k,\mathfrak{B},B}(\alpha|x_1,...,x_N,\beta) = \prod_{k=1}^N \frac{\beta}{\pi(\beta^2 + (x_k - \alpha)^2)}, \blacksquare$$
 (6)

# **QUESTION 6:**

Explain how one obtains the x-position of the robot from the result in (5).

#### Solution 6:

The x-position of the robot is determined by taking the product of the distributions of each  $x_k$  measurement, as the measurements are independent. The x-position can also be obtained by locating the peak of the distribution or by using Maximum-A-Posteriori (MAP) estimation.

### **QUESTION 7:**

Implement the Bayesian position inference scheme in MATLAB. Assume the robot is located inside a confined square region of size  $10 \text{m} \times 10 \text{m}$ . Demonstrate your Bayes estimator by inferring the robot's x-position from the data  $x_k^{200}$  in BayesData.mat, with the robot's y-position at 4.5 m. Plot the Bayes posterior distribution for N=1,2,5, and 30 measurements. What is your best x-position estimate?

#### Solution 7:

The MATLAB code implementing the Bayesian position inference scheme is provided in Appendix A, with the corresponding plots in Appendix B. For N=30, the best estimate of  $\alpha$  is approximately 5.86, as inferred from the posterior distribution. This is within the square region.

### **QUESTION 8:**

The notation presented above deliberately does *not* follow the conventions introduced by your Probability lecturer. Throughout your assignment, use the notation prescribed for use in the course.

#### Solution 8:

Yes, the following random variable notations are used:

$$\Lambda(\cdot) = \alpha; \mathfrak{B}(\cdot) = \beta; X(\cdot) = x_k; \Theta(\cdot) = \theta_k \ p(\theta_k | \alpha, \beta, B) = f_{\Theta | \Lambda, \beta, B}(\cdot, \cdot, | \alpha, \beta) \ p(\alpha | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, \beta, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, B) = f_{\Lambda | X, \mathfrak{B}, B}(\cdot, \cdot, | x_k, B) = f_{\Lambda | X, \mathfrak{$$

### **QUESTION 9:**

Provide a professional report with clear and effective data representation. The report must not exceed 5 pages in length.

#### Solution 9:

This report follows the homework assignment format. References used include [2], [3].

### (Bonus) QUESTION 10:

Infer both the x-position and the y-position of the robot. Estimate both  $\alpha$  and  $\beta$  for the PDF in Eq. (1).

#### Solution 10:

(Solution is to be provided.)
